Explore trees and forests through literature search

Project Title	Explore trees and forests through literature search
Project Summary	How does a particular tree respond to sun or shade? Neighboring big or small trees? Can forest managers do special practices in perpetuate a tree species or increase its health or vigor? What is the potential our our native trees to keep pace with climate change?
Country	United States

Project Description

In this project, the student will work with a Forest Service scientist to review the literature of what is known about white pine, tulip poplar, northern hardwood forests, or management (including climate adaptation practices). The student and scientist will work to develop a series of research questions. The student will use their university's library to search for relevant scientific literature to study and synthesize answers. The potential outcomes include a professional conference poster (or talk), report, or educational materials (for web, social media, or QR codes).

Required Skills or Interests

Skill(s)
Analytical writing
Infographic design
Research
Storytelling/blogging/vlogging
